Chemical Testing

What's In Your Compound?

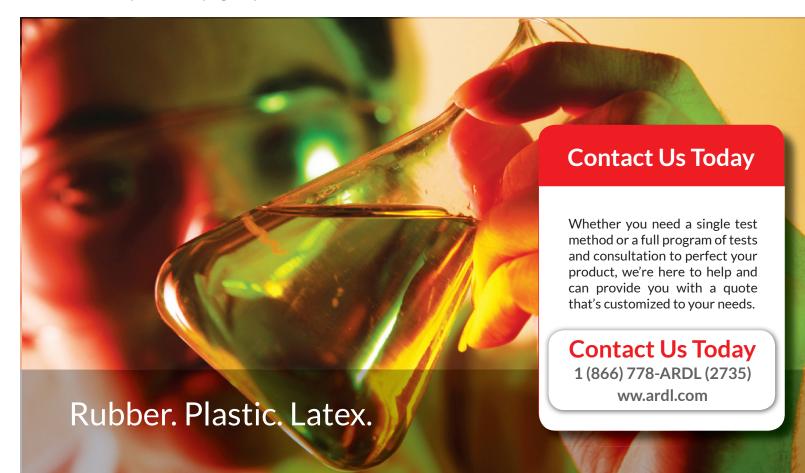

ARDL's chemical services laboratory specializes in analyzing composite rubber along with thermoset and thermoplastic material compounds. A full range of services is available, from single material identification to complete analysis and theoretical formula reconstruction.

Why Perform Such a Detailed Analysis?

Complex analysis performed at ARDL, such as the chemical reconstruction of an elastomeric compound, can aid you in:

- Assuring the quality of ingredients in your compound
- Finding the root cause of catastrophic or premature failure
- Reducing the cost of material development
- Supporting you during forensic investigation and litigation
- Enabling you to keep up with your competitors
- Eliminating product performance variations
- Investigating possible patent infringement
- Determining ingredients for FDA approval
- Ensuring specification compliance
- Verifying the approval and acceptance of imported goods by US Customs

ARDL is an independent laboratory and will work to identify the root cause of failure, regardless of its origin, and will assist you in rectifying the problem.

What information will a chemical analysis provide?

- Accelerators Qualitative Only
- Antioxidant Identification
- Carbon Black Content
- Halogen Presence
- Percent Ash
- Percent Total Extract
- Plasticizer Identification

- Polymer/Polymer Blend Identification
- Rubber Hydrocarbon Content
- Semi-Quantitative Ash Analysis (Filler Types and Percents)
- Specific Gravity
- Theoretical Formula Reconstruction
- Total Sulfur Content

Calculated Ash Content
Calculated Extractables8.1%
Calculated Carbon Black <u>25.0%</u>
Calculated Density (Mg/m³)

^{*}Comments: it may contain rosin acids, accelerator fragments and other reaction products, etc.

To further enhance and more exactly match an unknown material, the following tests can be performed at an additional charge:

- Acrylonitrile Content
- Antioxidant/Antiozonant Quantification
- Carbon Black Typing
- Free Sulfur Content
- Fiber Identification

- Halogen Content Analysis
- Pyrolysis GC/MS
- Resin Identification
- Thermal Analysis (DSC, DMA, TMA and TGA)
- Wax Content

Note: Reconstructed formulation is based on analytical data from your sample. The above calculated percentages are based on the reconstructed formulation.
